

**Release Notes**

# hp StorageWorks Business Copy EVA/MA/EMA Host Agent v2.2 for IBM AIX

**Product Version:** 2.2

Fourth Edition (October 2003)

**Part Number:** T3032-98104

The HP StorageWorks "Business Copy (BC) for enterprise virtual array (EVA), modular array (MA), and enterprise modular array (EMA)" is the new name for the "Enterprise Volume Manager (EVM)" software.

This document summarizes features and characteristics of the HP StorageWorks Business Copy Host Agent v2.2 for IBM AIX release that are not covered elsewhere in the documentation set.

Business Copy EVA/MA/EMA Host Agent v2.2 for IBM AIX Release Notes  
Fourth Edition (October 2003)  
Part Number: T3032–98104

## About this Document

This section describes the content reflected in this document, including:

- [Release Notes Information](#), page 3
- [Intended Audience](#), page 3
- [Business Copy Documentation](#), page 3
- [Business Copy Product Updates](#), page 3

## Release Notes Information

These Release Notes cover the following BC topics:

- [Hardware and Software Requirements](#), page 4
- [Limitations and Known Issues](#), page 6

## Intended Audience

This document is intended for customers who purchased BC v2.2 or are now updating these environments to BC v2.2, and for HP authorized service providers responsible for installing, configuring, and maintaining systems that include BC software.

## Business Copy Documentation

BC documentation includes documents distributed through an initial purchase of BC v2.2 (contained in a BC documentation kit) and through a Web release of BC updates. Refer to the *HP StorageWorks Business Copy EVA/MA/EMA v2.2 Read Me First* (T3032-99101) or *HP StorageWorks Business Copy EVA/MA/EMA v2.2 Update Read Me First* (AA-RQ70G-TE) for a list of these documents and document part numbers.

Visit the BC product page website (<http://h18000.www1.hp.com/products/storage/software/bizcopyeva/index.html>) for all available BC documentation (except the BC online Help & User Guide).

## Business Copy Product Updates

BC product updates, if available, are located at the BC software and drivers page website:

<http://h18000.www1.hp.com/products/storage/software/bizcopyeva/index.html>.

## Hardware and Software Requirements

The following sections identify hardware and software requirement changes for this BC host agent. Topics include:

- [Operating System Version Support](#), page 4
- [Cluster Support](#), page 4
- [Secure Path Requirements](#), page 4
- [HBA, Firmware, and Driver Requirements](#), page 5

### Operating System Version Support

The BC v2.2 Solaris Host Agent supports the following IBM AIX versions:

- AIX v5.1
- AIX v5.2

### Cluster Support

The BC v2.2 IBM AIX host agent is not supported in HACMP cluster configurations.

### Secure Path Requirements

The BC v2.2 host agent requires the presence of Secure Path and is not supported in single-path or single HBA environments. The following Secure Path versions are supported:

- Secure Path v2.0C
- Secure Path2.0C, SP1
- Secure Path v2.0D

## HBA, Firmware, and Driver Requirements

HBA, firmware, and driver requirements are listed in [Table 1](#).

**Table 1: HBA, Firmware, and Driver Requirements**

Vendor	HBA model	Firmware	Driver
Cambex	PC1000	2.01.38	1.5.20.2+
	PC2000	2.01.38	1.5.20.2+

## Limitations and Known Issues

This section is an extension of a similar section in the *HP StorageWorks Business Copy EVA/MA/EMA v2.2 Network Administration Guide* (T3032–96101) and can help avoid problems while using BC v2.2. Limitations and known issues include the following topics:

- [Replication and the UNMOUNTVGSOURCE Variable](#), page 6
- [UNIX OSs with Netscape Browsers and JRE 1.4.0x](#), page 7
- [Mounting Multiple Raw Logical Volumes per Volume Group](#), page 7
- [Multiple Jobs that Try to Replicate the Same Volume Group](#), page 7
- [Postinstallation Best-Practices](#), page 8

### Replication and the UNMOUNTVGSOURCE Variable

*Description:* When the UNMOUNTVGSOURCE variable is set to *true*, BC jobs *cannot* replicate:

- A Volume Group (VG) by the VG name; the job must snap a VG member (logical volume) by name.
- A *raw* VG.

This problem applies only to the following OSs: HP-UX and IBM AIX.

*Error Indication:* The BC job that contains the VG name will fail when the job reaches the FREEZE step. The Job Details page for the failed job indicates `Remote spawn request has failed` in the blue status bar.

*Resolution/Workaround:* To replicate a VG, select one of the VG members (logical volumes/mount points) within the VG to be replicated. This selection method will replicate each of the logical volumes that comprise the VG.

This issue did not exist in the EVM V2.0x host agent version. If a BC job containing a VG name fails, check to see if the failure occurred due to the UNMOUNTVGSOURCE variable setting as stated above. The BC job may require modification to allow the job to run without error.

This replication bug will be corrected in a future release.

## UNIX OSs with Netscape Browsers and JRE 1.4.0x

*Description:* Sporadically, UNIX® OSs with Netscape browsers and JRE versions 1.4.0x may experience a problem entering data in specific fields of the Job Create page. This intermittent problem is referenced as a known bug in the Sun Microsystems Bug Database (# 4767070).

*Error Indication:* Inability to insert text in the **Name**, **Owner**, and **Category** fields of the Job Create page.

*Resolution/Workaround:* A fix is in JRE 1.4.1\_02. A workaround for prior JRE versions involves using the mouse to change *focus* away from the current application to another window, and then returning to the current application.

In BC, for example, the user can click *focus* away from the applet area in BC by:

1. Clicking in the upper header area of the BC GUI, and then
2. Clicking back within the applet area to regain *focus* on the text fields.

## Replicated Volume Groups cannot be Mounted on Different OS Versions

A clone or snapshot copy of an AIX v5.2 volume group cannot be mounted on an AIX v5.1 host, and vice versa.

## Mounting Multiple Raw Logical Volumes per Volume Group

*Description:* A single raw mount will make all logical volumes in the volume group available. Trying to mount multiple raw LVs per volume group will cause problems during job execution and undo. This limitation applies only to raw logical volumes (those that do not contain filesystems).

*Error* None

*Indication:*

*Resolution/Workaround:* Don't create BC jobs that try to mount more than one raw LV per volume group.

## Multiple Jobs that Try to Replicate the Same Volume Group

*Description:* Part of the process of replicating an IBM AIX volume group involves placing the volume group that is being copied into a consistent state. Business Copy does this through the use of a utility called *VGfreeze*. The specific behavior of *VGfreeze* is determined by the state of the UNMOUNTVGSOURCE parameter mentioned

above. If multiple VGfreeze processes are executed against the same volume group at the same time, they will conflict and one or more of them will fail, causing the Business Copy job to fail.

<i>Error</i>	None
<i>Indication:</i>	
<i>Resolution/</i>	Don't run more than one job at the same time that tries to replicate the same
<i>Workaround:</i>	volume group.

## Postinstallation Best-Practices

All open browser windows must be closed and then the browser reopened before browsing to the SMA software, after any of the following installations.

- BC host agent v2.2
- Any browser or new browser version
- A JRE or a new JRE version

If problems between the browser and Java applets (such as the lack of a display in the lower portion of the BC screen) persist after closing and reopening the browser, the browser cache or Java plug-in cache may be responsible.

To clear the cache in Internet Explorer, use the following procedures:

1. Choose **Tools>Internet Options**.
2. From the **General** tab, under **Temporary Internet Files**, click **Delete Files**.
3. In the **Delete Files** window, click **OK**. (There is no need to check the **Delete all offline content** option.)

To clear the cache in Netscape, use the following procedures:

1. Choose **Edit>Preferences**.
2. In the navigation pane, choose **Advanced>Cache**.
3. Click both **Clear Memory Cache** and **Clear Disk Cache**.
4. Click **OK**.

To clear the cache in the Java plug-in, use the following procedures:

1. Open the Java plug-in console.
2. From the **Cache** tab, click **Clear JARCache**.
3. Close the Java plug-in console.
